## MINIMAL FUSS

Most people want a lawn that they can simply mow, fertilise once or twice a year and still have it looking great all the time. Palmetto Buffalo turf provides all of the above with minimal fuss. Unlike other buffalo lawns that have a rough surface, Palmetto has a very soft leaf, perfect for your kids to play on. Even though Palmetto is not as hard wearing as other Buffalos it has a good growth across the ground. Palmetto is perfect for commercial areas, as well as your family backyard. Having a deep root system also makes Palmetto the perfect pick for large areas as it is more water efficient and drought resistant.

## HIGH QUALITY

Palmetto is a lawn that has outstanding winter colour, on average it has 75.5% better winter colour than other Buffalo grass types. Also being able to thrive in full sun Palmetto will continue to grow in shaded areas where other grasses may fail, only needing between 2-4 hours of direct sunlight. Unlike other Buffalo grasses that grow rapidly, Palmetto tends to have a slower upward leaf growth and is believed to be the only Australian Buffalo grass on the market that does this. If this doesn't appeal to you the fact that Palmetto is a low allergenic grass might. In a full year trial at Richmond, Palmetto had an average of 40% less seed head than other Buffalo varieties.

## RECOMMENDED CARE REQUIREMENTS

- Mowing height is approximately 40mm
- During Summer mow every 1-2 weeks
- During Winter mow every 2-3 weeks
- Fertiliser is generally 2-4 applications a year
- Full sun, handles approximately 70% shade
- Low water usage, still recommended to water regularly
