COST OF LAYING TURF	QTY	RETAIL
The laying fee covers "Installation only" that is, laid on a prepared surface. The soil bed must be prepared before delivery at a depth of 100-150mm and levelled up. Turf will then be laid on this surface, rolled, then watered.	Less than 150m2	\$385.00
	151m2 - 500m2	\$1.85 m2
	501m2 - 800m2	\$1.65/m2
	801m2 - plus	\$1.30/m2

LAWN BLOCK - 610X410MM (0.25M2)	CODE	RETAIL EA
SIR WALTER (Per lawn block)	N6346	\$3.26
PALMETTO (Per lawn block)	N6730	\$3.26
WINTERGREEN (Per lawn block)	N6347	\$1.69
EMPIRE ZOYSIA (Per lawn block)	N6348	\$3.35
PRESTIGE (DARKEST BUFFALO) (Per Lawn Block)	N6986	\$3.79
OZ TUFF (Per Lawn Block)	N7070	\$2.10
JARI BLU (Per lawn block)	N6813	\$4.20
NARA ZOYSIA (Per lawn block)	N7038	\$4.20

GROTURF FERTILISER 8KG	N6870	\$43.48
UNDERTURF STARTER 4KG	N6871	\$49.45
UNDERTURF STARTER 900G	N6872	\$17.90
TURFMAXX FERTILISER 4KG	N6873	\$31.00
OXAFERT FERTILISER 20KG	N7080	\$173.60
ACELEPRYN 10KG	N6943	\$168.75
BOW & ARROW HERBICIDE 500ML	N6944	\$66.90

DELIVERY RATE: \$77.00. (free if over 300m2)

The standard delivery area includes Brisbane Metro, as far as Gympie, Pottsville and Amberley. If you require a delivery outside these regions please ask a Nuway staff member to quote a price for delivery. Extra freight will be charged for difficult access.

Forklift is available for direct to site deliveries. A palletless system is used.

DESCRIPTION:

Palmetto Buffalo Turf - soft leaf buffalo grass, perfect for commercial areas, as well as your family backyard, having a deep root system makes Palmetto the perfect pick for large areas as it is more water efficient and drought resistant. Can handle approximately 70% shade (requires 2-4 hours of direct sunlight). Palmetto tends to have a slower upward leaf growth and is a low allergenic grass (40% less seed head)

Wintergreen Couch - A fine bright green leaf - Wintergreen lawn needs to be in full sun, (2 hours of shade and it will die off)

Ideal for Parks, Sports fields, Road Verges, Foothpath, Dam walls & Residential yards.

Empire Zoysia Turf - Fine dark green leaf with a luxurious soft to touch feel - It is a semi shade tolerant (requires 4-5 hours full sun per day) It is one of the most drought tolerant turf varieties, with its deep root and underground runner system.

Oz Tuff - A Couch with a high wear, low maintenance & salt tolerant . - Needs to be in full sun (can only handle 2 hours of shade or it will die off). A slow growing less mowing turf.

Sapphire - A finer textured Buffalo with a deep green and a tinge of blue (Sapphire) colour, excellent wear resistance due to Sapphire being able to recover well from any injury caused. Salt resistant grass and low water usage. Shade tolerance of 70% each day.

Jari Blu- has a medium leaf with excellent wear tolerance. Thrives in extreme heat and is salt tolerant. Low water usage.

Copes with 40-50% shade each day. Grows well in both Clay and sandy soil.

GUIDE TO LAYING TURF

STEP 1 - Measuring & Ordering:

Think of your lawn as a garden of grass. Before planting, prepare the soil as you would any garden bed. Measure the area of your planned lawn. Include these measurements on a sketch of the lawn area, with the length, width, along with any obstacles such as trees and any unusual features. If you need help figuring a square metre, your friendly Nuway team member will be happy to determine the amount you will need from your sketch (see graph on reverse side for your use). Schedule your order for delivery of the turf after preparatory work is completed and you are ready to install. Prompt installation is crucial to a strong beginning for your lawn.

STEP 2 - Preparation:

Spray out existing weeds and grasses (allow minimum of 10-14 days for a good kill) with a systemic weed killer such as Round-up. Be careful around existing shrubs to not let the spray hit them. If you have an existing lawn, remove existing grass after it dies and haul away. If you have an underground sprinkler system, be sure to flag the sprinkler heads so you won't damage them during preparation and installation. Rake out the area and smooth the soil removing rocks, roots and large clods. Talk to your Nuway representative to see if your site will require an under-turf mix. We have a wide range available to suit your specific site conditions

STEP 3- Turf Installation:

Install your lawn immediately upon delivery or return home. Begin watering lawn within 30 minutes of installation. Turf is a living plant that requires ground contact and moisture to survival.

Use a lawn roller to obtain a professional finish. Roll the area lightly with the roller 1/3rd to 1/2 full of water. This will firm the soil surface and reveal low areas that need more soil. Eliminate any drainage problems by having soil slope away from foundations etc. Keep the grade 25mm below sidewalks or driveways (the turf is about 25mm thick). It is a good idea to rake again lightly after rolling.

Water the prepared area to settle soil and provide a moist base for turf. Moistening to a depth of 100-150mm is recommended for most soils.

Begin installing turf along the longest straight line, such as a driveway or sidewalk. This first line is important, as it will help you establish the entire lawn correctly. Butt and push edges and ends against each other tightly, without stretching. Avoid gaps or overlaps. Stagger the joints in each row in a brick-like fashion, using a large sharp knife to trim corners, sprinkler heads, sidewalks, etc. Avoid leaving small strips at outer edges as they will not retain moisture. On slopes, place the turf pieces across the slope instead of up or down the slope. Tamp the turf or gently use a roller to establish good root contact with the soil. Fill any gaps with loose soil. To avoid causing indentations on air pockets, avoid repeated walking or kneeling on the turf while it is being installed or just after watering. After installing the turf, roll the entire area to reduce air pockets.

STEP 4- Watering:-

Give your new lawn 25mm of water within 1 hour of installation. Water daily, or more often especially on hot and windy days), KEEPING TURF MOIST, until it is firmly rooted and knitted together (about 2 weeks). Once the turf has knit, it should be watered enough over the first few months to maintain a healthy growing condition. Once established, weather conditions will dictate the amount and frequency of watering. Be certain that your new lawn has enough moisture to survive hot, dry or windy periods. Water areas near buildings more often where reflected heat dries the turf.

STEP 5- Fertilising:-

It is recommended that you add a fertiliser such as Sir Launcher Fertiliser to the prepared soil before laying your turf. This fertiliser contains both Urea and water crystals which aid in the establishment of your new lawn. Approximately two weeks after laying the turf, re-fertilise your lawn. Sir Walter Fertiliser is recommended for all turf types.

Maintenance:-

Approximately 7 to 10 days from time of installation, mow with a sharp mower. The first mow should not be attempted until turf is firmly rooted and secure in place. Generally, remove no more than 1/3rd of the grass height at a mowing. Keep your mower blade sharp.
