

Guide to Landscaping Products – Part 1

Organic garden Soils

All Nuway soils meet the Australian Standard 4419 and are subject to continuous trials, monitoring and testing to guarantee the best quality of the product. No human sewerage sludge or bio-solids are used.

5 Star Gold Label Soil: The best in our range. Based on Washed Horticultural Ash, highest quality aged Organic Compost, Composted Cow Manure, Loamy Topsoil and Washed Sand. This organic haven for your precious plants is a scientifically balanced blend of the finest ingredients, making it a nutrient rich and dense, but well drained mixture. Suitable for all applications.
Australian Standards Approved.

Premium Organic Blend: Based on crushed coal stone (Mineral Soil) 58% and Composted organics 42%, pH at (6.5 – 7.5). This versatile soil or growing media is suitable for all applications. Annual gardens, vegetable beds, herbs, fruit trees, roses, shrubs planting and is great for natives.
Australian Standards Approved.

Organic Mix: Based on natural sandy-topsoil with added organic matter and compost. pH at 6.5 – 7.5. Organic mix is free draining but with sound moisture retention. Used for general and ornamental planting, annuals, border plantings and underturf. Australian Standards Approved

All organic soils should be thoroughly wet from below and the addition of a liquid or general purpose fertiliser is recommended for the best results, particularly annuals and seedlings. Mulch well to retain moisture. The adherence in hygiene procedures such as gloves, covered work gear refraining from eating or smoking whilst handling, as well as washing hands after work is recommended for handling all soils.

Natural Soils

Overturf: Washed sand and quality sandy loam mix with composted chicken manure and hardwood sawdust. Ideal for top dressing your lawns and can be used for under turf or grass seeding.

Underturf Mix: A perfect blend of screened sandy soil, with 12% organic matter added for drainage, great for laying turf and filling holes.

Mulches

For best results from mulching, mulch should be laid at a minimum of 100mm in depth. All organic mulches help soil retain moisture, keep the soil cool and insulate plant roots during freezing temperatures; also suppresses weed growth.

Pine Bark Nuggets 25mm: A natural mulch, it is a mulch material produced from the shredded bark of the pine tree. It is reddish brown in colour, ranging from light brown to dark brown. **Also available in a 50mm as well.**

Cypress Mulch: Long lasting, white ant resistant, repels cockroaches, borers and mosquitoes. Maintains rich deep red colour and is pH neutral. The product is completely organic and has an extremely pleasant aroma. It naturally deters harmful insects including cockroaches and termites.

Tea Tree Mulch: Is made from the unused products left after the tea tree oil making process. It retains a quantity of natural insect repellent and is a fine grade, making it easy to spread. Rich and Dark in colour with a very pleasant aroma.

Cypress Chip A Grade: Softwood chippings from the trunk of the tree. A natural deterrent of termites, bugs and insects. Light and tan coloured. It naturally deters harmful insects including cockroaches and termites.

Eco Bark Mulch 5-20mm: Is a rich dark surface mulch and is an excellent cost effective alternative to pine bark mulch.

Rural Fines Mulch: Attractive double ground fine mulch, dark in colour. Perfect for tidying up your gardens on a budget.

Hoop bark 25-37.5mm: Is a traditional landscaper's favourite product for heavy wind swept areas or steep embankments. It is a curly brown product with a rough texture, varying in colour from a deep brown to glimpses of deep pinks and reds. Hoop pine bark will interlink perfectly to hold on in almost any situation – also great for drainage.

Cypress Blend: Is a fine combination of cypress mulch and wood chip, grinded down to create this fine cypress mix. This is an organic material used in landscaping and gardening. It naturally deters harmful insects including cockroaches and termites.

Nu-Chip Terracotta: A cypress chip that has naturally been dyed a brilliant terracotta colour. It naturally deters harmful insects including cockroaches and is termite resistant. This mulch also has a slow break down rate. It naturally deters harmful insects including cockroaches and termites.

Pine Fines 5-10mm (Softfall): Commonly used for playgrounds. It has a light texture and a natural reddish brown tan colour. This product is ideal for mulching small gardens, heavily planted areas, indoor settings and kid's playgrounds.

Cypress Uluru Red Mulch: A Cypress blend that has been dyed a rich vibrant red colour. It is a natural deterrent of harmful insects including termites and cockroaches. It also has a slow break down rate. It naturally deters harmful insects including cockroaches and termites.

Cypress Carbon Black Mulch: A natural carbon black dye that is grinded into the blend to give long lasting colour in a fine and consistent textured mulch. This product is long lasting. It naturally deters harmful insects including cockroaches and termites.

Sugar Cane Mulch: Cut from cane stalks, this mulch is excellent on vegetable gardens, around fruit trees and is easy to handle. It will help promote micro-organisms and earthworms.

Soil Improvers

Organic Xtra: Enrich your soil, enjoy rapid growth, consider the environment & enjoy crops which are healthy to consume. Organic Xtra is the perfect blend of composted manure, blood & bone, fish meal, seaweed & more – 100% natural, organic, easy to apply and suitable for the entire garden. You can't go wrong!

Eco 88: Achieve fast growth and long lasting colour with Eco88s, a quality, balanced fertiliser that combines organic and inorganic elements. This premium fertiliser is suitable for the whole garden and fantastic for lawns due to its balance of nutrients, its granular form and added iron.

Gypsum: Natural gypsum is the best way to add calcium and sulphur to tightly packed soils. Boosting the calcium levels help to break up the clay, making it easier to dig and more receptive to crop roots and moisture. Gypsum will not alter the pH of the soil.

Cements

Onemix: Concrete and Mortar bags- only need the addition of water.

Onemix Rapid Set: A blend of cement, aggregate, sand and additives which set in approximately 15 minutes.

Onemix Post Mix: Develops a sturdy yet pliable consistency, suitable for post-hole applications.

GP Cement: Used in most concrete, mortars and grouts in a wide range of applications. Has 0% fly ash.

Builders Cement: This cement has added fly ash to slow the curing process and to improve workability and durability.
