NUMBER ONE FOR WEAR

Oz Tuff has been ranked number one for wear tolerance and is an excellent choice for high wear recreational areas and sports grounds such as stadiums, cricket pitches and parks. Having an extensive root system helps store moisture below the surface and gives the lawn exceptional tolerance to drought conditions. Oz Tuff has been the pick for many people purchasing lawns based on the fact that it is very low maintenance. Having a slower vertical growth and developing very few seed heads results in less mowing and more time for you to sit back and enjoy your lawn.

QUALITIES OF OZ TUFF

Due to the reduced seed head production, Oz Tuff is a low allergen variety of lawn which means that it is suitable for both people and animals who suffer from any allergies to grass. There has been great success from buyers who suffer from grass allergies as they have had no complaints from their purchase of lawn. Oz Tuff also has a lower nutritional requirement than other green couches by requiring less fertiliser, however it is recommended to get a soil test as poor soil quality may determine how often your lawn will need to be fertilised. Oz Tuff has the ability to take to just about any ground surface, even poorer quality soils and where recycled water may be the primary water source, also having a high salt tolerance makes this a suitable variety for almost any area.

RECOMMENDED CARE REQUIREMENTS

- Recommended mowing height is 15-30mm
- Mow every 1-2 weeks during Summer
- Mow every 2-3 weeks during Winter
- Fertiliser applications recommended is 2-4 per year
- Low water usage, though still maintain regular watering
